Review of Statistical Concepts

Dr. Ali Kh. Al-Matar <u>aalmatar@ju.edu.jo</u>

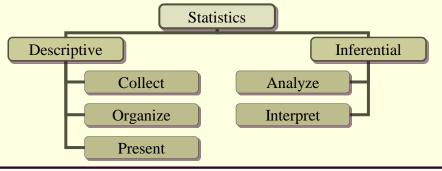

Outline

- Review of statistics
- Measures of central tendency
- Measures of dispersion
- Measures of Symmetry

What is Statistics?

 Statistics is the science dealing with data to assist in making more effective decisions in the face of uncertainty

SQC-03: Review of Statistical Concepts

©Dr. Ali Khalaf Al-Matar, aalmatar@ju.edu.jo

Why Study Statistics?

- Numerical information is everywhere!
- Statistical methods are used to make decisions that affect our lives.
- To understand why decisions are made and how such decisions affect us.

Population & Sample

- **Population** is the collection consisting of all possible outcomes of an experiment, measurement, or observation.
- **Sample** is a subset or a part of the population.

Measures of Central Tendency: Mean

Mean

Sample Population

$$\overline{X} = \frac{\sum_{i=1}^{n} X_i}{n} \qquad \mu = \frac{\sum_{i=1}^{N} X_i}{N}$$

Weighted Mean

Sample Population

$$\overline{X_{w}} = \frac{\sum_{i=1}^{n} w_{i} X_{i}}{\sum_{i=1}^{n} w_{i}} \quad \mu_{w} = \frac{\sum_{i=1}^{N} w_{i} X_{i}}{\sum_{i=1}^{N} w_{i}}$$

Central Tendency: Median

- The mean is very sensitive to outliers.
- Median is defined as a rigorous estimator of central tendency.
 - Sort the data in ascending order
 - The median is defined such that 50% of the values are above, and 50% are below it.

$$X = \begin{cases} Value((n+1)/2), & n \text{ is odd} \\ Average(Value(n/2), Value(n+1)/2)), & n \text{ is even} \end{cases}$$

SQC-03: Review of Statistical Concepts

CDr. Ali Khalaf Al-Matar, aalmatar@ju.edu.jo

Central Tendency: Mode

- Mode: the value of the most frequently encountered observation.
- Mathematically, it is the most frequent value i.e., the maximum of the distribution.

SQC-03: Review of Statistical Concepts

©Dr. Ali Khalaf Al-Matar, aalmatar@iu.edu.io

Measures of Dispersion

- Averages provide information about *central* tendency but it does not provide any info about the *spread* of the data
- Range is the difference between the maximum and minimum values of the random variable we are interested in

$$Range = Max - Min$$

SQC-03: Review of Statistical Concepts

©Dr. Ali Khalaf Al-Matar, aalmatar@ju.edu.jo

Dispersion: Variance and Standard Deviation

Variance

Sample:
$$s^2 = \frac{\sum_{i=1}^{n} (X_i - \overline{X})^2}{n-1}$$

$$Population: \sigma^{2} = \frac{\sum_{i=1}^{n} (X_{i} - \mu)^{2}}{N}$$

Standard Deviation

$$Sample: s = +\sqrt{s^2}$$

Population :
$$\sigma = +\sqrt{\sigma^2}$$

©Dr. Ali Khalaf Al-Matar, aalmatar@ju.edu.jo

Measures of Dispersion II

■ Coefficient of Variation (CV) is the ratio of standard deviation to the arithmetic mean. Usually, it is expressed in percent

$$CV = 100 \frac{s}{\overline{X}} \%$$

■ It is a good measure for comparing different values of means and standard deviations

11

Measures of Symmetry: Skewness

- Measures of dispersion give some values about the spread of a distribution.
- They don't provide any info about the shape of the distribution around the mean or median.
- Coefficient of skewness (Sk) is defined to alleviate such lack of info

$$Sk = \frac{3(mean - median)}{s}$$

Useful Excel Functions

- Average
- Stdev
- Mode
- Median
- Skew
- MAX and MIN

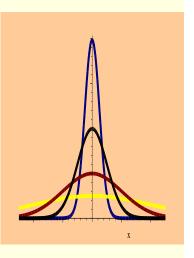

SQC-03: Review of Statistical Concepts

CDr. Ali Khalaf Al-Matar, aalmatar@ju.edu.jo

13

Normal (Gaussian) Distribution

- Most important and widely used distribution
- Occurs naturally due to "central limit theorem"
- Describes
 - Error distribution
 - Height, and weight of individuals
 - Life expectancy of certain products, people etc.
 - Good approximation for many distributions

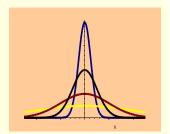

SQC-03: Review of Statistical Concepts

©Dr. Ali Khalaf Al-Matar, aalmatar@ju.edu.jo

Characteristics of the Normal Distribution

- Bell shaped and has a single peak (unimodal) at the center of the distribution.
- \blacksquare Mean = Median = Mode.
- Symmetrical around the mean
- Falls asymptotically.

1σ	68.26%
2σ	95.44%
3σ	99.74%

SQC-03: Review of Statistical Concepts

15

Mathematics of the Normal Distribution

- The normal distribution is characterized by two parameters:
 - Mean (µ).
 - Standard deviation (σ) .

$$f(x,\mu,\sigma) = \frac{1}{\sqrt{2\pi}\sigma} \exp\left[-\frac{(x-\mu)^2}{2\sigma^2}\right]$$
$$F(x,\mu,\sigma) = \frac{1}{\sqrt{2\pi}\sigma} \int_{-\infty}^{x} \exp\left[-\frac{(x-\mu)^2}{2\sigma^2}\right] dx$$

SQC-03: Review of Statistical Concepts

Dr. Ali Khalaf Al-Matar, <u>aalmatar@ju.edu.j</u>c

Standard Normal Distribution

- The standard normal distribution has a mean of 0 and standard deviation equal to unity.
- The standard normal distribution is useful since there is no closed form integral for the cumulative pdf. It reduces all families of normal distributions to one using the *z* transform.

SQC-03: Review of Statistical Concepts

©Dr. Ali Khalaf Al-Matar, aalmatar@ju.edu.jo

17

The z Transform

 Used to convert between the actual normal distribution and standard normal distributions

$$z = \frac{X - \mu}{\sigma}$$

SQC-03: Review of Statistical Concepts

©Dr. Ali Khalaf Al-Matar, aalmatar@ju.edu.jo

Useful Excel Function

- \blacksquare NORMSDIST(z): standard normal distribution
- NORMSINV(p) : inverse standard normal distribution
- NORMINV(p,m,s): inverse general
- NORMDIST(X,m,s,Cumulative) : general

SQC-03: Review of Statistical Concepts

1

Example 1

- A life test on a large number of type D alkaline batteries revealed that the mean life for a particular use before failure is 19.0 hours. The distribution of lives approximated a normal distribution. The standard deviation was 1.2 hours.
 - About 68% of the batteries failed between what two values?
 - About 95% of the batteries failed between what two values?
 - Virtually all of the batteries failed between what two values?

SQC-03: Review of Statistical Concepts

Solution

$$\mu$$
=19 σ = 1.2

1. 68% will fail between $\pm 1\sigma$

$$19 \pm 1(1.2) = [17.8,20.2]$$

2. 95% will fail between $\pm 2\sigma$

$$19 \pm 2(1.2) = [16.6,21.4]$$

3. Virtually all will fail at about $\pm 3\sigma$

$$19 \pm 3(1.2) = [15.4,22.6]$$

SQC-03: Review of Statistical Concepts

©Dr. Ali Khalaf Al-Matar, aalmatar@ju.edu.jo

2

Example 2

A tire manufacturer wants to set a minimum mileage guarantee on its new MX100 tire. Tests revealed that the mean mileage is 47900 with a standard deviation of 2050 miles and a normal distribution. The manufacturer wants to set the minimum guaranteed mileage so that no more than 4% of the tires will have to be replaced. What minimum guaranteed mileage should the manufacturer announce?

SQC-03: Review of Statistical Concept

Solution

Use the z transform

$$z = \frac{X - 47900}{2050}$$

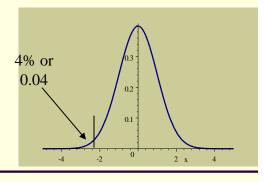

Two unknowns z and X

Use NORMSINV

z=-1.75

Now z is known , find X as

X= 44312

2

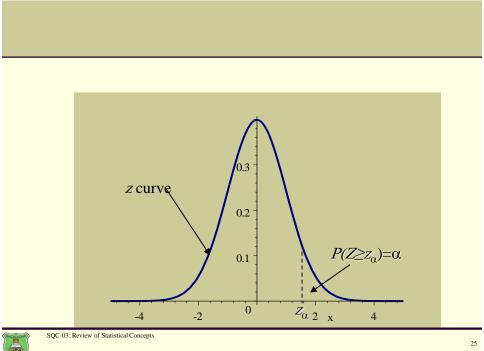

z_{α} Notation

- In statistical inference need arises for certain small tail areas under the standard normal curve
- \mathbf{z}_{α} will refer to the value on the measurement axis for which α of the area under the z curve lies to the right of z_{α} .
- \blacksquare z_{α} is usually referred to as the "critical values"
